ADARSH

ENTRUSTED, CREATIVE AND POSITIVE MINDSET

Hello, I'm a sophomore studying Machine Learning with a keen interest in transitioning beyond academia into the practical realm of Data Science. Alongside my academic pursuits, I've ventured into freelancing on several projects, leveraging my strong programming skills. My primary focus is gaining hands-on experience and enhancing my analytical abilities to tackle real-world challenges in the field of machine learning.

Education

B-Tech Computer Science and Engineering
2st year 2024

Higher secondary

CBSE(2020-21) 89%

Secondary
CBSE(2018-19) 90%

Technical Skills

PYTHON	DBMS
JAVA	REACT JS
C	DSA
C++	C++
CSS	HTML
HTML	JAVA SCRIPT

Language

English

Hindi

Project's

Tic-Tac-Toe game

2022 - 2024

In following language --Python, C, C++ ,HTML-CSS- JavaScript

In Python, you can utilize nested lists to represent the Tic-Tac-Toe board and functions for displaying the board, getting player input, checking for a winner, and managing turns. C, on the other hand, offers simplicity with a 2D array for the game board and functions to handle gameplay. In C++, you can employ object-oriented principles, creating classes for the board and players to organize the code more effectively. For a web-based version, HTML provides the structure, CSS handles styling, and JavaScript manages interactivity, resulting in an engaging user experience with a grid layout for the game board.

TUCKSHOP MANAGER

2022-23

Using --HTML-CSS- JavaScript

To create a shopping website using HTML, CSS, and JavaScript, begin by structuring the site with HTML, defining elements like headers, product listings, and checkout forms. Next, use CSS to style the website, making it visually appealing and responsive. Finally, enhance interactivity with JavaScript by implementing features such as adding products to the cart, updating quantities, and handling checkout processes. This combination of technologies allows for a dynamic and user-friendly shopping experience.

SCIENTIFIC CALCUTOR

2022-2024

In following language --Python, C, C++ ,HTML-CSS- JavaScript

In Python, you can create a scientific calculator with a graphical user interface using libraries like tkinter. For C/C++, a command-line interface would be more suitable, where you'd parse mathematical expressions and evaluate them. With HTML, CSS, and JavaScript, a web-based calculator can be designed, allowing users to interact with it in their web browsers. JavaScript would handle user input and perform calculations, updating results dynamically on the webpage.

Hobbies

Travelling

Solo traveling and exploring new cuisine provide opportunities for personal growth and cultural immersion through adventurous culinary experiences.

Bicycling

Cycling during the transitional period from darkness to dawn in your town offers a uniquely serene and invigorating experience.

Rolling Delights

Embracing a love for trying new foods means being open to new tastes, textures, and ingredients, which can lead to exciting and memorable dining experience.

Anime Voyage

Watching anime provides a captivating escape from reality, allowing you to immerse yourself fully in the stories and characters without distraction.
